

Everything in Nature is about Balance

Better results with a little help from nature

SmartCare BALANCE H is a probiotic mix with scientifically proven strains, selected to improve shrimp larval and juvenile rearing.

The BioMar team is ready to assist you.
Together we can find the solution that is best suited to comply with your needs.

YOU CARE. WE CARE.
SmartCare™

SmartCare™ BALANCE

Probiotic mix for improving shrimp larval and juvenile rearing

BioMar brings extensive knowledge in the utilisation of probiotics in aquaculture feeds and now, with **SmartCare BALANCE**, we offer a solution to enhance optimal environmental conditions and a natural balance for shrimp to thrive in.

BALANCE H is a mix of selected microorganisms for improving the water quality through to the degradation of organic matter, reduction of toxic compounds and stabilisation of the microbial flora.

BALANCE H has the ability to colonize the digestive system of shrimp and to stimulate the immune system of larvae and juveniles.

BALANCE H is effective under the following conditions:

- Low dissolved oxygen concentrations (up to 1 % saturation)
- Wide temperature range (between 20 and 35 °C)
- Salinities between 1 and 50 g/L

Product use

BALANCE H is a ready to use product; it does not require any type of activation.

- In larval and postlarval tanks:
1 to 3 g/m³ of water per day, as the culture progresses and the biomass in the tanks increases.
- In juvenile tanks:
0.05 - 0.1 g/m³ water per day.

Add the recommended amount of **BALANCE H** into 5 litres of water originating from the cultivation tank, homogenise the mix and spread it evenly over the whole water surface of the tank.

The application rate depends on farming conditions, larval density, presence of pathogens and water exchange rate.

Contact your local BioMar technical support to get information on the application rate recommended for your farming system.

Packaging

Aluminium foil bag 500 g

Composition

Bacillus spp. (*B. pumilus*, *B. amyloliquefaciens*) .. ≥ 1.5 x 10¹⁰ CFU/g
Pediococcus acidilactici ≥ 1.0 x 10¹⁰ CFU/g
Inorganic carrier

Storage

Store in a cool, dark, and dry place in its original packing. Do not open until you want to use it.

Unopened, the product can be kept for at least 24 months after date of manufacture.

Contains an oxygen absorber.

BioMar is a leading supplier of high-performance aquafeed to the global aquaculture industry. Currently, BioMar operates 17 feed factories placed across the globe in Norway, Chile, Denmark, Scotland, Spain, France, Greece, Turkey, China, Costa Rica, Ecuador and Australia.

Roughly one out of five farmed fish produced in Europe, South and Central America is fed on BioMar feed. Worldwide, BioMar supplies feed to around 90 countries and for more than 45 different species of fish and shrimp.

BioMar's rigorous management systems and procedures combined with transparency and traceability create a fundament for our excellent records in food safety.
