BioMar Ltd Policy Scope - Research, and Development, Manufacture and Supply of Extruded Dryfeed for Fishfarming in Fresh & Seawater Farms.

BioMar' Scottish headquarters in Grangemouth are part of a Multinational Company, engaged at the forefront of research, development, production and sales of high quality fish feeds for a variety of National and International aquaculture markets.

BioMar supplies feeds, which offer superior performance for farmed fish destined for human consumption, accounting for animal health and recognising the responsibilities of supply into the human food chain.

BioMar is fully committed to the continual improvement of its Feed Safety performance and in doing so complies with all relevant regulatory and industry requirements. To fulfil this improvement, and indeed as a part of the Company's wider continual improvement, a fully Integrated Quality Management System has been established which incorporates ISO 22000:2018.

Through the quality management system, Biomar provides a framework for the setting and review of feed safety objectives each year at the system review (IMS review). These are set in line with significant environmental, quality and business objectives. Once agreed, key department objectives are continually monitored and measured through a number of operational meetings and communicated across departments.

Whilst a high level of Feed Safety is regarded as the responsibility of all employees, a dedicated team selected from across the business have been trained in HACCP (Hazard Analysis and Critical Control Point) in order to provide a highly competent focus in this specific area.

This policy is freely available to relevant internal and external parties on request. It is communicated to new staff through the induction process and also displayed within BioMar Ltd main office building.

Signed:

Rob Wilson

UK Business Unit Director
